

	Experiment title: Brefeldin A-ADP ribosylated substrate	Experiment number: LS-1933
Beamline: ID29	Date of experiment: from: 15-09-01 to: 16-09-01	Date of report: 01-09-2002
Shifts: 3	Local contact(s): Bill Shepard	<i>Received at ESRF:</i>

Names and affiliations of applicants (* indicates experimentalists):
Nardini Marco, X-ray Structural Biology Lab
Advanced Biotechnology Center
Largo Rosanna Benzi, 10
16132 Genova
Italy

Report:

MAD experiment on Se-Met substituted BARS.

Se-Met BARS crystals did not survive a complete MAD data set. A series of data sets have been collected at the Selenium edge. However, scaling problems made all data sets not useful for the identification of the heavy atom sites.
