

**X-ray diffraction experiment with crystals of FetA-EPch-Fe from
*Pseudomonas fluorescens***

Experiment 30-01 846

Several crystals of FetA-ePchFe obtained in new crystallization conditions were tested. All of them diffracted X-ray at very low resolution. Very thin crystals obtained in a previous crystallization condition diffracted X-ray beyond 4 Å resolution and data were collected at 3 Å resolution.
