

Experiment title:
Residual stress relaxation in Ti-6Al-4V alloy wedges

Experiment number:
HS310

Beamline:

BM 16

Date of experiment:

from: 26 November 1997 to: 29 November 1997

Date of report:

20 February 1998

Shifts:

9

Local contact(s):

G B M Vaughan

Received at ESRF:

3 MAR. 1998

Names and affiliations of applicants (* indicates experimentalists):

Report:

Preliminary Report

A fault was detected in the focussing monochromator system at the start of this experiment as the wavelength was being changed from its previous setting to the shorter wavelength required for the experiment. The fault proved to be serious and it was impossible to fix it during the time scheduled for the experiment. Consequently no measurements could be made. The experiment is to be re-scheduled at a later date in 1998.
